

**Monthly report on livestock disease trends as informally reported by veterinarians belonging to the Ruminant Veterinary Association of South Africa (RuVASA), a group of the South African Veterinary Association**

**July 2019**

(Previous disease reports can be seen on the RuVASA website [www.ruvasa.co.za](http://www.ruvasa.co.za) )

These reports include data from individual practices

**Click on Disease Reports**

**The following practices and laboratories (125) submitted reports during July 2019:**

**Mpumalanga (15)**

Balfour – Dr. Lous van Jaarsveld  
Bethal – Dr. Hardus Pieters  
Ermelo – Dr. Ben Potgieter  
Grootvlei – Dr. Neels van Wyk  
Hendrina – Dr. Anja Steinberg  
Karino – Dr. Silke Pfitzer  
Lydenburg – Dr. Marietjie Malan  
Lydenburg – Drs. Trümpelmann and Steyn  
Malalane – Drs. Van Sittert and Van Sittert  
Middelburg – Drs. Erasmus and Bernitz  
Middelburg – Dr. Neil Fourie  
Nelspruit – Dr. André Beytel  
Piet Retief – Dr. Niebuhr and Weber  
Standerton – Dr. Kobie Kroon  
Volksrust – Dr. Johan Blaauw

**Gauteng (8)**

Bronkhorstspruit – Dr. De Bruin, De Bruin and Labuschagne  
Hammanskraal – Dr. Hentie Engelbrecht  
Magaliesburg – Dr. Ryan Jeffery  
Nigel – Dr. Cindy van der Westhuizen  
Onderstepoort Veterinary Academic Hospital – Proff. Annandale, Shakespear, Holm, Pettey and Drs, Fitte, Grobler, Hamman, Koeppel, Leask, Mabu, Marufu, Mokoele, O'Dell, Tshuma and Van der Leek

Pretoria – Dr. Hanneke Pienaar  
University of Pretoria – Dr. Emily Mitchel  
Vanderbijlpark – Dr. Kobus Kok

### **Limpopo (9)**

Bela-Bela (Warmbaths) – Dr. Nele Sabbe  
Bela-Bela – Drs. Malan, Hansen and Bester  
Modimolle (Nylstroom) – Drs. Huber, Bredell and Barnard  
Makhado (Louis Trichardt) – Drs. Harris, Klopper and Herbst  
Mokopane (Potgietersrust)- Dr. Henk Visser  
Polokwane (Pietersburg) – Drs. Watson, Viljoen, Jansen van Vuuren, Van Rooyen, Snyman and Cremona  
Tzaneen – ZZ2 Farm practice – Dr. Danie Odendaal  
Vaalwater – Dr. Hampie van Staden  
Vaalwater – Dr. Annemieke Müller

### **North West (11)**

Bloemhof -Dr. Cizelle Naude  
Brits – Dr. Boshoff and Coertze  
Christiana – Dr. Pieter Nel  
Klerksdorp/Coligny/Fochville/Hartebeesfontein/Ottosdal/Potchefstroom – Drs. Van den Berg,  
Van den Berg, Van der Walt and Geral  
Klerksdorp/Schweizer-Reneke – Drs. Coetzee and Venter  
Leeudoringstad – Dr. Ian Jonker  
Lichtenburg – Dr. Nelmarie-Krüger-Rall  
Potchefstroom – dr. Martin Ferreira  
Stella - Dr. Magdaleen Vosser  
Ventersdorp/ Koster –Drs. Benadé and Van der Merwe

### **Free State (20)**

Bethlehem – Drs. Du Plessis and Louw  
Bultfontein – Dr. Santjie Pieterse  
Clocolan – Drs. Wasserman and Basson

Oudtshoorn – Dr. Glen Carlisle  
Piketberg – Dr. André van der Merwe  
Plettenberg Bay – Dr. André Reitz  
Riversdale – Drs. Du Plessis, Taylor and De Bruyn  
Stellenbosch – Dr. Alfred Kidd  
Swellendam – Dr. Jacques Malan  
Tulbagh/Ceres – drs. Hamman, Wilson and Triegaardt  
Vredenburg – Dr. Izak Rust  
Worcester – Dr. Kobus Rabé

#### **Northern Cape (7)**

Calvinia – Dr. Bertus Nel  
Colesberg – Drs. Rous and Rous  
De Aar – Dr. Donald Anderson  
Kathu – Dr. Jan Vorster  
Kimberley- Drs. Van Heerden and Swart  
Postmasburg – Dr. Boeta van der Merwe  
Upington – Drs. Vorster, Fourie and Visser

#### **Feedlots (1)**

Drs. Morris and Du Preez

#### **Laboratory reports (4)**

Dr. Marijke Henton - Vetdiagnostix, Johannesburg  
Dr. Liza du Plessis – Idexx SA - Johannesburg  
Dr. Rick Last – Vetdiagnostix, Pietermaritzburg  
Dr. Sophette Gers – Pathcare, Cape Town

## **BIOSECURITY**

Biosecurity should not be just a word but should be an action. All of us (producer organizations, farmers and their employees, politicians, veterinarians, co-op personnel, representatives, auctioneers, agricultural writers and inhabitants of the Republic of South Africa) should be protecting our national herd becoming infected with organisms which could harm them and the people consuming products of animal origin.

We have been talking and writing, participating in TV and radio programmes, farmer's days and meetings on brucellosis, foot and mouth disease, Rift Valley fever, trichomonosis, Asiatic red water, cryptosporidiosis, *E. coli*, snotsiekte, rabies, fear of East Coast fever, sheep scab, ram's disease, listeriosis, tuberculosis, African swine fever, bird flu to name a few important diseases that we were confronted with during the last year or two. Stock theft and farm murders are on the increase. Water sources are polluted. Welfare issues were problematic.

Farmers had been hit by export restrictions, falling of meat prices and production losses – when will we ever learn to protect our investments with all our might!

**We are not doing what we should! Identifying our animals, controlling movement, vaccinating our animals and demanding vendor declarations when buying animals- Buyer beware!**

All is not doom and gloom – many farmers, although in the minority, are doing the correct thing. Following a closed herd policy, identifying their animals, testing their animals for brucellosis, movement control, animals that are bought and showed are quarantined before introducing them into the herd. Joint action by government and private sector during disease outbreaks through the National Animal Health Forum proved to be successful.

Our main goal now, should be to get a Livestock Identification and Traceability System (LITS) in place. This will enable us to establish compartments and help to contain an outbreak within a short time period.

In unity lies our strength – join your producer organization!!

See what is happening with the worst outbreak of an animal disease in the world: Swine Fever

South Africa has one of the best biosecurity systems for swine in the world!

Outbreaks occurred in rural areas and pig auctions led to outbreaks in informal areas but due to compartments and excellent biosecurity of the commercial farmers, the disease has been contained although outbreaks still occur in the communal areas.

Communal farmers that occurred losses due to African swine fever were financially supported from statutory levy fund that was set up by commercial pig farmers.

Since April 2019 there have been fourteen reported outbreaks of African Swine Fever (ASF) in South Africa, all situated outside the ASF controlled area.

The following areas have been affected:

Date notified to the OIE	Locality	Province
10 April 2019	Zeerust area	North West Province
18 April 2019	Delmas area (a)	Mpumalanga Province
30 April 2019	Daveyton area	Gauteng Province
13 May 2019	Heilbron area	Free State Province
22 May 2019	Vanderbijlpark area	Gauteng Province
4 June 2019	Nigel area (a)	Gauteng Province
14 June 2019	Nigel area (b)	Gauteng Province
14 June 2019	Nigel area (c)	Gauteng Province
14 June 2019	Marikana area	North West Province
25 June 2019	Koppies area (a)	Free State Province
11 July 2019	Nigel area (d)	Gauteng Province
11 July 2019	Koppies area (b)	Free State Province
8 August 2019	Delmas area (b)	Mpumalanga Province
8 August 2019	Nigel area (e)	Gauteng Province

## OIE World wide situation of African Swine Fever

<https://www.oie.int/en/animal-health-in-the-world/animal-diseases/african-swine-fever/>

### Conclusion

The global pattern of distribution of ASF in this period reveals a serious deterioration due to the spread of the disease, mainly in Europe, and in Asia, after the first occurrence in China (People's Republic of) in 2018. In this context, the work of GF-TADs2 Global Steering Committee in empowering regional alliances in the fight against transboundary animal diseases (TADs), in providing capacity building and in assisting the countries establishing programmes for the prevention, preparedness and control is of pivotal importance for the control and eradication of the disease at global level. Member countries are reminded that the OIE Terrestrial Animal Health Code provides comprehensive guidance to veterinary authorities for establishing a country, zone and compartment free of African swine fever (ASF) as well as recommendations relating to the trade of pork and pork products. These products when, handled in accordance with hygienic practices complying with international standards, are not a source of infection. The OIE also encourages Member countries to implement enhanced national sanitary measures on waste disposal from aircrafts/vessels/passengers and enhanced on-farm biosecurity measures – including the protection of pigs from untreated swill feeding and the effective separation between domestic pigs and wild boar – and stresses the importance of OIE international standards for risk management of transboundary animal diseases (TADs) to reduce the risk of exporting disease to trading partners.

**Production animal farming should take lessons from this global outbreak and step up their own security measures at farm level.**

**Summary of disease report for July 2019**

125 Reports from veterinary practices and laboratories were received (Mpumalanga (MP) 15; Gauteng (G) 8; Limpopo (L) 9; Northwest (NW) 11; Free State (FS) 20; KwaZulu-Natal (KZN) 13; Eastern Cape (EC) 13; Western Cape (WC) 24; Northern Cape (NC) 7; Feedlots (FL) 1 and Laboratories (Lab) 4).

### **A list of diseases and conditions reported by veterinarians in 5 or more provinces**

## Bovine Brucellosis

Although we have made positive steps in controlling Bovine brucellosis, the model disease stated in the Veterinary Strategy, we as a country is far from achieving our goal!

**If farmers will just comply by vaccinating their animals against brucellosis, according to law, the incidence of brucellosis will drop dramatically as shedding of bacteria will drop!**

Many farmers are still shrugging their shoulders and saying: "Why should I test my animals as it will only cost me money and what if there are positive animals? My farm will be placed under quarantine, so I am not going to test my animals!"

Dr. Trudie Prinsloo a veterinarian and legal advisor has compiled legal aspects regarding brucellosis control and it is VERY IMPORTANT that you should avail yourself with the content of this document.

It is available in English and Afrikaans.

# **Legal Aspects of Brucellosis Control**

## **Introduction**

The main purpose of the Animal Diseases Act, No. 35 of 1984 ("the Act") is to control important and dangerous animal diseases. The Act and its Regulations have general control measures relevant to all diseases but also have specific control measures for certain diseases, such as brucellosis.

## **Livestock owners must inform certain people of presence of disease**

Section 11 of the Act determines that livestock owners must take reasonable steps to prevent their animals from becoming infected and to prevent the spread of disease. This means that an owner is not allowed to knowingly buy infected animals and bring them into his herd. Where treatment is possible and available owners are also obliged to treat infected animals. An owner who suspects that his animals are infected with a controlled disease must report it to the local responsible state veterinarian.

The Regulations also stipulates that an owner who becomes aware of the presence of a controlled disease in his livestock must inform the following groups of people:

- all his neighbours;
- all prospective buyers;
- all buyers who had bought animals from him within the preceding 30 days.

This is the case even if the disease has not been confirmed yet but is suspected.

## **Precautionary measures that are legally required**

Table 2 of the Animal Diseases Regulations determines that all heifers between 4 and 8 months of age must be vaccinated once with an effective vaccine for brucellosis (currently the only approved vaccines available are Strain 19 and RB51). Strain 19 may only be used in heifers between 4 and 8 months of age and it may not be repeated. Follow-up vaccinations with RB51 in female animals may be done, but only with the written permission of the responsible state veterinarian. No bulls may be vaccinated, regardless of their age.

Animals may only be tested by a state veterinarian or official or a private veterinarian. It is not compulsory to test all cattle at this stage, but it is highly recommended, and it might become a legal requirement in the future. In specific circumstances the Director of Veterinary Services may compel an owner to test his animals.

## **Requirements for a positive herd**

If there are any animals that test positive, the laboratory must immediately inform the responsible state veterinarian and if the tests were requested by a private veterinarian, he will also be informed of the

results. The state veterinarian will then place the farm under quarantine which means that no susceptible or infected animals may be moved from the farm without the permission of the state veterinarian. A quarantine notice will be given which will contain all the requirements that the owner will have to adhere to. The requirements in the quarantine notice may differ depending on the situation.

Every owner also has a duty to isolate infected and contact animals and keep them in isolation as soon as he becomes aware of the presence or suspected presence of brucellosis in his herd. An owner that removes his animals knowing that there are positive animals on his farm, commits an offence in terms of the Act, even if he has not been placed under quarantine by the state veterinarian yet.

All contact animals must also be tested by an official or authorized person. Animals which test negative may be vaccinated for brucellosis with the written permission of the state veterinarian.

Positive cattle must be branded with a "C" mark on the right side of their necks. Such animals may only be slaughtered with the written permission of the state veterinarian and at an approved abattoir. Animals may only be moved to the abattoir under cover of a Red Cross permit and may only be moved to the specific abattoir indicated on the permit. Under no circumstances may such animals be sold to any other person or at any other place and a person that does that is guilty of an offence in terms of the Act.

An owner must minimize contact with animals in isolation and only allow persons responsible for the care of the animals and officials responsible for implementing the control measures to have access to them.

Milk from cows that are infected or suspected to be infected with brucellosis may not be used for any purpose unless it has been boiled, pasteurized or sterilized.

The owner also has a duty to disinfect the area where the infected animals had been kept with an effective disinfectant and this includes the vehicles on which such animals were transported. Any equipment that has been potentially infected must also be disinfected in the prescribed manner.

Where any control measures have been performed on the animals, the owner must keep the proof thereof. This includes proof of vaccinations. Where the control measures had been done by an official or private veterinarian, the owner should request a certificate which contains the details of such measures. If an owner had performed some of the measures personally, proof can be provided by way of an affidavit accompanied by empty container and proof of purchase where relevant.

### **Role of the State Veterinary Services**

Both National and Provincial Veterinary Services are mandated to implement and enforce the Act. They can compel an owner to have his animals tested if there is a suspicion that they might be infected. Owners who refuse to cooperate or comply with the requirements can be served with an order which compels him to take certain steps within a required period. They also have the power to enter a property or vehicle in order to conduct an inspection. If an owner, or someone acting on behalf of the owner transgress the Act, criminal charges can be made. In special circumstances, officials may even take control over a property in order to control a disease, whilst the costs of the control measures will be for the owner's account. State Veterinary Services will however only do this in extreme circumstances and always attempt to get the owner's cooperation first.

## **Voluntary test programmes**

The Bovine Brucellosis Scheme (R.2483 of 9 Dec 1988) is currently enforced. There is also an interim manual for the control of bovine brucellosis available, which has been compiled by the Department of Agriculture, Forestry and Fisheries. Since the bovine brucellosis control policy is currently under revision, further details will not be discussed here.

## **Conclusion**

It is important to remember that the Act aims at protecting the national herd, as well as humans against serious diseases such as brucellosis. All the control measures have been put in place for the purpose of this aim and not to punish people. Simply by following the principles of disease control and prevention, it should be easy to remain within the framework of the Act.

## **BUYER BEWARE**

# **Wetlike Aspekte van Brusellose Beheer**

## **Inleiding**

Die hoofdoel van die Wet op Dieresiektes, No 35 van 1984 ("die Wet") is om belangrike en gevlarlike dieresiektes te beheer. Hierdie Wet en die Regulasies daaronder bevat algemene bepalings maar stipuleer ook spesifieke beheermaatreëls vir seker dieresiektes soos brucellose.

## **Vee Eienaars moet sekere mense inlig oor siektes**

Artikel 11 van die Wet bepaal dat vee eienaars alle redelike stappe moet neem om siektes en parasiete in hulle diere te voorkom en die verspreiding daarvan te verhoed. Dit beteken dat 'n eienaar nie willens en wetens besmette diere mag aankoop en tussen sy ander vee inbring nie. Eienaars is ook verplig om diere te behandel indien hulle wel besmet word waar behandeling moontlik en toelaatbaar is. Indien 'n vee eienaar vermoed dat sy diere 'n beheerde siekte het, is hy verplig om dit onmiddellik by die verantwoordelike staatsveearts aan te meld.

Die Regulasies bepaal verder dat 'n eienaar die voorkoms van 'n beheerde siekte moet bekend maak aan die volgende groepe mense:

al sy bure;

alle voornemende kopers;

kopers wat die voorafgaande 30 dae diere by hom gekoop het.

Dis belangrik om daarop te let dat dit ook geld selfs al word die siekte slegs nog vermoed.

### **Voorkomende maatreëls wat wetlik vereis word**

Tabel 2 van die Dieresiektes Regulasies bepaal dat alle verse tussen die ouderdom van 4 en 8 maande eenmalig ingeënt moet word met 'n effektiewe entstof vir brucellose (tans is die enigste twee entstowwe wat goedgekeur is Stam 19 en RB51). Stam 19 mag slegs in verse tussen 4 en 8 maande oud gebruik word en mag nie herhaal word nie. Opvolginentings met RB51 in vroulike diere is wel toelaatbaar indien die verantwoordelike staatsveearts skriftelik toestemming gee daarvoor. Bulle mag nie ingeënt word nie, ongeag hulle ouderdom.

Diere mag slegs getoets word deur 'n staatsveearts of - beampte of deur 'n privaatveearts. Dit is nie op die oomblik verpligtend dat alle beeste getoets moet word nie, maar dit word aanbeveel en mag moontlik in die toekoms vereis word. In spesifieke gevalle mag die Direkteur van Veeartsenydienste wel 'n eienaar verplig om sy diere te laat toets.

### **Vereistes vir 'n positiewe kudde**

Indien enige diere positief toets moet die laboratorium die verantwoordelike staatsveearts dadelik inlig. As 'n privaatveearts die toetse aangevra het sal die veearts ook ingelig word. Die staatsveearts sal die plaas onder kwarantyn plaas, wat beteken dat geen vatbare of besmette diere sonder toestemming van die staatsveearts van die plaas verwyder mag word nie. Die kwarantyn kennisgewing bevat die vereistes waaraan die eienaar moet voldoen en moet streng nagekom word. Dit mag effens ----- verskil van geval tot geval en hang af van die spesifieke situasie.

Elke eienaar het self ook 'n plig om alle besmette en kontak diere te isoleer en in isolasie te hou sodra hy bewus word van brucellose in sy kudde of selfs net van 'n vermoede daarvan. 'n Eienaar wat sy diere verwyder wetende dat daar positiewe diere is, oortree die Wet selfs al was hy nie onder kwarantyn geplaas nie.

Alle kontakdiere moet ook getoets word deur 'n beampte of gemagtigde persoon. Diere wat negatief toets mag met die skriftelike toestemming van die verantwoordelike staatsveearts geënt word teen brucellose.

Alle positiewe beeste moet gebrandmerk word met 'n "C" op hulle regter nek. Sulke diere mag alleenlik met die skriftelike toestemming van die staatsveearts geslag of verwyder word na 'n goedgekeurde abattoir. Diere kan net na 'n abattoir vervoer word met 'n Rooikruispermit en mag slegs na die spesifieke abattoir, wat op die permit aangedui is, gevat word. Sulke diere mag onder geen omstandighede aan

enige ander persoon of op enige ander plek verkoop word of van kant gemaak word nie, en 'n persoon wat dit doen, oortree die Wet en dit is 'n strafbare handeling.

Die eienaar moet toegang tot diere, wat in isolasie angehou word, beperk. Slegs persone wat verantwoordelik is vir die versorging van die diere en beampes wat beheermaatreëls moet toepas, mag toegang tot sulke diere hê.

Melk van diere wat met brucellose besmet is (of vermoedelik besmet is) mag glad nie vir enige doel gebruik word nie tensy dit gekook, gepasteuriseer of gesteriliseer is.

Daar rus ook 'n verpligting op die eienaar om die plek waar 'n besmette dier angehou is, en die voertuig waarop so 'n dier vervoer is, te ontsmet met 'n effektiewe ontsmettingsmiddel. Enige toerusting, wat potensieel besmet is, moet ook op die voorgeskrewe manier ontsmet word.

Bewys van enige beheermaatreëls, wat op die diere toegepas is, moet deur die eienaar gehou word. Dit sluit bewys van inentings in. Indien dit deur 'n beampte of veearts gedoen word, moet die eienaar daardie persoon vra vir 'n sertifikaat waarop die besonderhede daarvan aangedui word. Indien dit deur die eienaar self gedoen is, moet hy bewys daarvan lewer deur middel van 'n beëdigde verklaring wat ook vergesel word van die leë houers en bewys van aankoop, waar die beheermaatreël die gebruik van middels insluit.

### **Rol van die Staat**

Dis is Nasionale en Provinciale Veeartsenydienste se mandaat om die Wet toe te pas. Hulle kan 'n eienaar verplig om sy diere te toets indien daar 'n vermoede is dat die diere besmet mag wees. Waar eienaars met verdagte of positiewe diere nie saamwerk nie, kan beampes 'n bevelskrif beteken op die eienaar wat hom verplig om sekere stappe binne 'n bepaalde tydperk te neem. Hulle het ook die mag om 'n perseel of voertuig te betree en inspeksies uit te voer. Indien 'n eienaar, of iemand wat namens die eienaar optree, die Wet oortree, kan daar kriminale klagtes gelê word teen die betrokke eienaar en persoon. In uiterste omstandighede mag beampes selfs beheer oor 'n perseel oorneem om siektebeheer uit te oefen, terwyl die kostes steeds vir die eienaar se rekening sal wees. Die staat poog egter altyd eers om die samewerking van die eienaar te kry en sal hierdie stappe slegs neem in hoogs uitsonderlike gevalle.

### **Vrywillige toetsprogramme**

Die Beesbrucelloseskema (R.2483 of 9 Dec 1988) word tans afgedwing. Daar is tans ook 'n Interim handleiding vir brucellosebeheer beskikbaar, wat deur die Departement Landbou, Bosbou en Visserye opgestel is. Aangesien die Beesbrucellose beheerbeleid tans onder hersiening is, sal verdere besonderhede nie hier bespreek word nie.

### **Samevatting**

Dit is belangrik om te onthou dat die bepalings van die Wet daar is om die nasionale kudde te beskerm, maar ook om mense teen ernstige siektes te beskerm. Alle beheermaatreëls is in plek gebring om hierdie

doelwitte te bereik en nie om as strafmaatreëls te dien nie. As mens net die beginsels van siektebeheer en siektevoorkoming navolg en alle nodige partye so spoedig moontlik inlig oor die teenwoordigheid van 'n beheerde siekte, behoort dit maklik te wees om binne die raamwerk van die Wet op te tree.

Saamgestel deur: Dr. Trudie Prinsloo Van Der Heever, veearts enregsadviseur  
[trudie@legalvetservices.co.za](mailto:trudie@legalvetservices.co.za)

Uitgereik deur: Brucellosestuurkomitee van die Nationale Dieregesondheidsforum

## When buying cattle this Vendor declaration can help you to minimize risk!

### VENDOR DECLARATION BOVINE BRUCELLOSIS

I hereby declare that I am the legal owner or authorised representative of the cattle on sale and am competent to make this declaration

1	The cattle for sale are clearly and permanently identified		Yes	No
2	The cattle for sale/slaughter were born on my farm		Yes	No
3	The farm has a closed herd policy i.e. I do not buy in cattle, rent out grazing or speculate with cattle		Yes	No
4	I practice bio-security on my farm to a level that is **	Poor	Moderate	Good
5	I vaccinate my heifer calves against Bovine Brucellosis once between the ages of 4 – 8 months		Yes	No
6	In addition, I vaccinate my cattle older than 8 months with RB51		Yes	No
7	I have all the cattle on my farm tested for Bovine Brucellosis		Yes (date)	No
8	My herd has been tested negative within the past year		Yes	No
9	I did not buy in cattle since my last negative brucellosis test		Yes	No

10	I/my vet investigates any abortions on my farm		Yes	No
11	To the best of my knowledge, my immediate neighbours and farms in my area are free of Bovine Brucellosis		Yes	No
12	I use a veterinarian to advise me on my cattle's herd health		Yes	No
13	The cattle handling facilities on my farm are	Poor	Average	Good

Note: Vaccination does not mean freedom from Bovine Brucellosis as cattle can still be carriers  
 Please attach the most recent *Brucella* blood test certificate

Owner or authorised representative: .....

Signature: .....

Date: .....

**\*\* \* Biosecurity**

Poor – speculates with cattle, does not vaccinate, poor fences, cattle come into contact with other cattle

Medium – Vaccinates heifers, does not buy in cattle of unknown health status

Good – closed herd/never buys in cattle, vaccinates heifers and no contact with other cattle, follows a herd health plan as advised by his veterinarian, does not allow transport trucks onto property, washes and disinfects truck after returning from the abattoir or auction grounds.

Compiled by: Dr. Sewellyn Davey, Chairman of the Brucellosis Steering committee of the National Animal Health Forum

## **OVINE JOHNE'S DISEASE VENDOR DECLARATION**

### **ON THE SALE OF SHEEP**

**(Updated Draft May 2015)**

1. I hereby declare that I am the owner or authorised representative of the sheep on sale and am competent to make this declaration.	<input type="checkbox"/> YES <input type="checkbox"/> NO
2. The sheep for sale are clearly identified in the accompanying description.	<input type="checkbox"/> YES <input type="checkbox"/> NO
3. The sheep for sale were born on my farm.	<input type="checkbox"/> YES <input type="checkbox"/> NO
4. The farm has a closed flock policy. (No live sheep are brought onto the farm from elsewhere)	<input type="checkbox"/> YES <input type="checkbox"/> NO
5. I know the signs of the disease and to the best of my knowledge, all of my properties are free of cases of Ovine Johne's Disease.	<input type="checkbox"/> YES <input type="checkbox"/> NO
6. I have actively looked for Ovine Johne's Disease and have had tests done for this.	<input type="checkbox"/> YES <input type="checkbox"/> NO
7. To the best of my knowledge, my immediate neighbours and farms in my magisterial district of my farm(s) are free of cases of Ovine Johne's Disease.	<input type="checkbox"/> YES <input type="checkbox"/> NO
8. The sheep on my properties have been vaccinated against Ovine Johne's Disease and are clearly marked with the approved ear tag.	<input type="checkbox"/> YES <input type="checkbox"/> NO
9. All lambs born are vaccinated	<input type="checkbox"/> YES <input type="checkbox"/> NO
10. If vaccinated, the number of years that the vaccinations have been done is	<input type="checkbox"/> <b>years</b>

**NOTE:** Vaccination does not mean freedom from OJD, vaccinated animals can still be carriers.  
Statement 8 and 9 apply only to already infected flocks, and such sheep can only be sold to other infected flocks by law.  
Buyers should consult their veterinary advisor before any purchases.

<b>1</b>	Fences and gates in good condition		
<b>2</b>	Gate control - log in		
<b>3</b>	Disinfection of vehicles coming onto the farm		
<b>4</b>	Protective clothing and boots given to people visiting the farm (cattle area) coming from high risk areas eg. veterinarians, nutritionists, representatives, truck drivers, workers, etc.		
<b>5</b>	Sterilizing equipment coming in contact with cattle		
<b>6</b>	Run off water/ streams from neighbouring farms		
<b>7</b>	All animals identified with a brand mark and ear tag		
<b>8</b>	Data base of all animals		
<b>9</b>	Closed herd		
<b>10</b>	When last were animals bought in or moved from another farm?		
<b>11</b>	Only buy in animals from a farm which has a recent negative tested brucellosis herd certificate		
<b>12</b>	Origin(s) of acquired cattle? Bought at an auction?		
<b>13</b>	Keep heifers separate from herd until they have calved and tested negative for brucellosis		
<b>14</b>	Quarantine camp available		
<b>15</b>	Separate calving camps		
<b>16</b>	Were all heifers vaccinated between 4 and 8 months vaccinated with Strain 19 or RB51?		
<b>17</b>	Any cattle vaccinated with Strain 19 over 8 months of age? History over last few years.		
<b>18</b>	Were there any abortions on the farm – samples taken, diagnosis?		
<b>19</b>	All sexually mature cattle in herd tested for bovine brucellosis (provide proof)		

<b>20</b>	Bovine brucellosis is a State controlled disease. Positive cattle are branded with a C on the right side of the neck.		
<b>21</b>	Isolation of infected animals & separate handling facilities		
<b>22</b>	Prohibition of movement of animals off quarantined property except under cover of a Red cross permit for slaughter at an abattoir		
<b>23</b>	Prohibition of use and on-farm disposal of unboiled, unpasteurised or unsterilised milk on quarantined property		
<b>24</b>	Disinfection of places where infection is a possibility.		
<b>25</b>	Neighbours/ recent buyers informed of infected herd status		
<b>26</b>	Fly, crow and predator control		
<b>27</b>	Destruction of afterbirths/abortions in a responsible manner		
<b>28</b>	Beware of livestock, game interface		

Websites that are there to help you with information regarding animal health:

## National Animal Health Forum

[www.nahf.co.za](http://www.nahf.co.za)

Read what the Forum is all about:

<http://nahf.co.za/about/>

This website will become the information centre of animal health in Southern Africa.

On the toolbar click on **Stakeholders** and you will find links to producer organizations and other organizations who are participating in the NAHF

<http://nahf.co.za/stakeholders/>

Provincial Animal Health Forums have their own site – click on **Provinces** <http://nahf.co.za/provinces/>

Important is to study the Veterinary Strategy (2016 -2026) as it gives direction to where we are going with Animal Health in South Africa.

<http://nahf.co.za/wp-content/uploads/Vet-strategy-final-signed.pdf>

Click on **Info centre** for more information on the “war” we have against Bovine Brucellosis. Please be up to date on the role all have to play to control this zoonotic disease.

<http://nahf.co.za/category/diseases/brucellosis/>

Information on other controlled diseases (Ovine Johne's Disease, Pest of small stock – PPR, and African Horse Sickness) is available.

This link will continuously be updated.

Information on **antibiotic resistance** is also available at this address:  
<http://nahf.co.za/category/antibiotic-resistance/>

## Rural Veterinary Association of South Africa

[www.ruvasa.co.za](http://www.ruvasa.co.za)

Click on **Disease reporting** where maps and information can be sourced on the prevalence of diseases in all provinces. Abattoir reports are available. Use the information available to update management programmes

### **Internal parasite control**

[www.wormx.info](http://www.wormx.info)

## **Farm gates, Fences and Foresight, the 3 F's!**

**Bear this in mind as this is where most disease-causing organisms enter or exit farms!**

**Major examples are: Foot and mouth disease, brucellosis, Johne's disease, TB, cryptosporidiosis, trichomonosis, vibriosis, sheep scab, resistant parasites such as red lice, blue ticks and internal parasites (Buyer beware programmes).**

**Insist on VENDOR'S DECLARATIONS when buying animals.**

## Quarantine

## **Immunization programmes**

**Speak to your veterinarian**

**Abide the law- vaccinate cattle against anthrax (outbreak in Lesotho) and heifers against brucellosis!**

**More than a thousand animals recently died due to organophosphorus poisoning**

## **READ LABELS AND MAKE DOUBLE SURE WHEN USING CHEMICALS AND DRUGS!!!!**

**Lock your chemicals, have control over them.**

**For the detailed report and previous reports go to [www.ruvasa.co.za](http://www.ruvasa.co.za) and click on Disease reporting**

## **Internal parasites**

**The following reports were received from practices regarding internal parasite infestations:**

Eyeworm					x				
Parafilaria			x	x		x			
Tapeworms	x	x			x	x			x
Liver fluke	x			x	x	x		x	x
Conical fluke	x		x		x	x	x		
Cysticercosis (measles)					x	x			x
Schistosomiasis (bilharzia)									
Coccidiosis	x	x	x		x		x	x	
Cryptosporidiosis	x				x	x	x	x	

Internal parasite outbreaks have been reported from 9 provinces. Use the five point check to keep on top of what is happening in the flock. For further detail contact your local veterinarian. Treatment is but one of many actions in the holistic management approach to control internal parasites.

Holistic internal  
parasite management

<http://hulp.landbou.com/kundiges/vra-vir-faffa/vyfpuntplan-en-famacha-stelsel-vir-inwendige-parasietbestuur-in-skape/>

[www.wormx.info](http://www.wormx.info)

FAMACHA cards can be obtained through your veterinarian (famachasystem@gmail.com)

Serious problems due to diarrhoea in lambs and calves were received from many areas. In many instances *Cryptosporidium* and pathogenic strains of *E. coli* were involved. Consult your veterinarian for help!

[https://www.google.co.za/search?hl=en&tbm=isch&source=hp&biw=1344&bih=608&ei=PyxyXOO70cutkwXinK3oCA&q=cryptosporidium+parvum&oq=Cryptosporidium&gs\\_l=img.1.1.0l10.2885.9850..16402...0.0..0.708.5719.2-4j4j3j2j1.....0....1..gws-wiz-img.....0.o66yefU7Ric](https://www.google.co.za/search?hl=en&tbm=isch&source=hp&biw=1344&bih=608&ei=PyxyXOO70cutkwXinK3oCA&q=cryptosporidium+parvum&oq=Cryptosporidium&gs_l=img.1.1.0l10.2885.9850..16402...0.0..0.708.5719.2-4j4j3j2j1.....0....1..gws-wiz-img.....0.o66yefU7Ric)

Prevention of Cryptosporidiosis

Since there is no vaccine or registered treatment for *Cryptosporidium*, prevention is the best control method. Animals with a good immune system will generally easily overcome *Cryptosporidium* thus this must be the main aim in controlling *Cryptosporidium*.

A consistent, yet approved and farm appropriate vaccination program for other diseases.

Ensure no nutritional deficiencies especially vitamin A and Selenium

Excellent bio-security

Ensure clean pathogen free water sources

## Hygiene training of personnel

Consult your veterinarian

## External parasites

The following reports were received from practices regarding external parasite infestations:

External parasites	MP	G	L	NW	FS	KZN	EC	WC	NC
Blue ticks	x	x	x		x	x	x	x	
Resistant blue ticks							x		
Heartwater ticks	x	x	x			x			
Brown ear-ticks	x					x			
Bont-legged ticks	x			x	x		x		x
Red-legged ticks		x		x	x				
Paralysis ticks							x		
Tampans									
Biting lice	x			x	x			x	
Sucking lice				x	x			x	x
Itch mites									
Sheep scab					x				x
Mange mites	x	x	x	x	x	x			
Nuisance flies					x	x			
Midges	x	x	x	x	x	x			

Mosquitoes									
Blowflies					x			x	
Screw-worm						x	x		
Gedoelstia (uitpeuloogsiekte)									
Nasal bot						x			

Even in the winter tick infestations were reported from most provinces. Blue ticks (African and Asiatic blue ticks) are able to transmit red water, anaplasmosis and lumpy skin disease.

Make sure to assess the blue tick resistance status on your farm before buying tickicides. Your veterinarian will be able to collect engorged blue ticks to be tested for resistance.

Actives to be tested for resistance are: organophosphates, pyrethroids, amidines, fipronil. Actives registered only for controlling blue ticks are: macrocyclic lactones, fluazuron (acaricide growth regulator).

Discuss your tick control programme with your veterinarian. Below is a list of diseases transmitted by ticks.

### Tick borne diseases

The following tick-borne diseases were reported by practices in the provinces:

Tick borne diseases	MP	G	L	NW	FS	KZN	EC	WC	NC
African red water	x	x	x	x		x	x	x	
Asiatic red water	x		x	x	x	x	x		
Anaplasmosis	x	x	x	x	x	x	x	x	
Heartwater	x	x	x			x	x		
Lumpy skin disease			x						
Corridor disease									
Theileriosis									

Asiatic red water (6 provinces) is spreading and is one of the deadliest diseases in cattle.

**Numerous mortalities were reported!**

The keyword is **vaccinate** your animals! Contact your veterinarian.

Anaplasmosis outbreaks were reported in 8 provinces.

#### **Tick toxicosis**

Tick toxicosis	MP	G	L	NW	FS	KZN	EC	WC	NC
Sweating sickness			x						x

#### **Insect transmittable diseases**

The following insect transmittable diseases were reported by practices in the provinces:

Insect transmittable diseases	MP	G	L	NW	FS	KZN	EC	WC	NC
Lumpy skin disease			x						
Ephemeral fever (Three-day-stiff sickness)									
Blue tongue		x			x				
Rift Valley Fever									
Wesselsbron									
Nagana						x			

Insect transmittable diseases will increase after the first spring rain.

#### **Veneral diseases**

The following venereal diseases were reported by practices in the provinces:

Venereal diseases	MP	G	L	NW	FS	KZN	EC	WC	NC
Trichomonosis	x			x	x	x	x		x
Vibriosis	x			x	x	x	x	x	
Pizzle disease					x				

<b><i>Actinobacillus seminis</i> plus HPA</b>									
---	--	--	--	--	--	--	--	--	--

New cases of **trichomonosis** are reported every month and this disease is out of control. **Make sure to buy bulls from farmers where biosecurity measures are in place and bulls are tested for these diseases at regular intervals. Trichomonosis were reported from 6 provinces.**

Make sure that fences are in tact and gates closed so that bulls cannot escape to neighbouring cows that may be infected with *Tritrichomonas* and become infected or infected neighbouring bulls are jumping fences.

Cattle study groups should discuss preventative and control measures with their veterinarians. **Be sure to test bulls regularly for these diseases.**

**Beware when buying in or sharing bulls! Remember female animals may also be infected.**

**Study the Good management SOP's for cattle farmers on the RPO website**

<http://www.rpo.co.za/wp-content/uploads/2016/04/nuutRPO-NERPO-Code-Addendum.pdf>

<http://www.rpo.co.za/wp-content/uploads/2016/04/nuutRPO-NERPO-Code-Addendum-4-Good-management-practices-and-SOPs-for-cattle-farmers-1.pdf>

**Consider Trichomonosis as an area disease, farmers should work together to keep areas free from diseases such as trichomonosis, brucellosis and sheep scab.**

## **Bacterial diseases**

The following bacterial diseases were reported by practices in the provinces:

<b>Bacterial diseases</b>	<b>MP</b>	<b>G</b>	<b>L</b>	<b>NW</b>	<b>FS</b>	<b>KZN</b>	<b>EC</b>	<b>WC</b>	<b>NC</b>
<b>Anthrax</b>									
<b>Blackquarter</b>	x			x	x	x	x		
<b>Botulism</b>			x	x				x	x
<b>Pulpy kidney</b>	x	x	x	x	x			x	x
<b>Lamb dysentery</b>									x
<b>Swelled head</b>	x		x						
<b>Red gut (cattle)</b>	x				x	x	x	x	

**Lumpy jaw**

Multiclostridial vaccines should be used if blackquarter outbreaks still occur when only using a vaccine containing *Clostridium chauvoei*. Remember to give a booster vaccine when using an inactivate vaccine for the first time. **Read the packet insert!!** Study the table above and determine the risk for animals on your farm.

Get advice from your veterinarian on *Cryptosporidium/E. coli* outbreaks in your area and what to do to prevent losses in lambs and calves.

**Enzootic abortion contributes to the disappearance of foetuses in sheep and goats scanned pregnant.  
Vaccinate replacement ewes with the live vaccine before putting them to the ram!**

Pulpy kidney (*Clostridium perfringens* type D – *epsilon* toxin) is still the biggest killer of sheep. There are various factors that could lead to pulpy kidney such as: the intestinal tract stops functioning (stasis), sudden change from poor veld to lush artificial pastures; sudden change in diet; grazing of fodder crops such as lucerne, green wheat and green oats, diet high in protein, overeating of concentrates or fertile pastures, deworming and coccidiosis infection. Sudden changes in the weather and grazing in wilted pastures, may also play a predispositional role.

**Be sure to vaccinate animals against botulism especially if chicken litter is going to be fed to animals during the winter season.**

**Challenging farmer's unions and study groups to eradicate brucellosis in their area!! Many success stories are already received!**

**Ask for vendor's declarations before buying in animals and quarantine them before releasing them onto the farm!!!!**

## Viral diseases

The following viral diseases were reported by practices in the provinces:

BVD	x	x	x			x			
IBR		x	x	x	x	x			
BRSV			x			x			
PI3						x			
Maedi visna virus									
Rotavirus / Coronavirus	x					x	x		
Enzootic bovine leucosis (EBL)			x	x		x		x	
Sheep leucosis									
Jaagsiekte		x				x			
Orf	x	x	x	x	x	x		x	x
Warts	x		x	x	x	x			x
Herpes mammillitis									

There is no treatment for viral diseases with the result that animals have to be protected by vaccinations if they are available.

Preventative vaccinations are the best way to protect animals against viruses and bacteria causing pneumonia.

**Keep cattle and wildebeest well separated especially when wildebeest are under stress to prevent snotsiekte outbreaks! There is also a sheep associated form of the disease. Reports received from 6 provinces!**

Discuss vaccination programmes and biosecurity measures with your veterinarian.

## Fungal diseases

The following fungal disease was reported by practices in the provinces:

Fungal diseases	MP	G	L	NW	FS	KZN	EC	WC	NC
Ringworm	x			x	x	x	x	x	

## **Protozoal diseases**

## Toxicities

**The following toxicities were reported by practices in the provinces:**

<i>Chrysocoma ciliata</i> (bitterbos)								
<i>Solanum incanum</i> (maldronksiekte)								
<i>Gomphocarpus (Asclepias) fruticosus</i> (milkweed)								
<i>Heliotropium</i> (potato weed)								
Bracken fern								
January bush ( <i>Gnidia polyccephala</i> )								
Chinkerinchee								
Ceylons rose								
Datura								
<i>Sarcostemma viminale</i> (melktou, caustic bush)								
<i>Malva parviflora</i> (kiesieblaar)								
Bitou								x
<i>Cotula nigellifolia</i> (Stagger weed, stootsiekbossie)								
Eucalyptus (bloekom) bark								
Kikuyu								
Ryegrass								
Lush pastures (Dikkop)								x
Ganskweek								
Paspalum staggers								
<i>Phalaris aquaticum</i> (Phalaris staggers)								
Photosensitivity (Turknael, <i>Erodium moschatum</i> )								x
Photosensitivity (Stellenbosch)								

Lusern								
Mycotoxicosis								x
Apergillus								
Aflatoxin								
Diplodiosis	x							
Lupins		x						
Harpuisbos								
Syringa berries								
Acorn								
Cycad								
Kraalbos, Geelbos ( <i>Galenia africana</i> )								
Radish								
Carrot poisoning								
Onion poisoning								
Bracken fern								
Pollen beetle ( <i>Astylus atromaculatus</i> )								
Water contamination								
Nitrate							x	
Tannins								
Urea	x	x		x		x		
Salt								
Wet carcase syndrome								x
Snake bite								
Moth cocoons (impaction)								

Blue green algae						
Copper				x	x	
Selenium						
Zinc						
Fluoride						
Lead						
Paraquat						
Phosamine						
Aldicarb						
Organophosphate					x	
Zinc phosphide						
Pyrethroid						
Amitraz	x					
Levamisole						
Ivermectin						
Moxidectin						
Oxytetracycline						
Tilmicosin						
Bromoxynil nitrate						
Ionophor						
Monensin						
Hypo						
Diazinon						
Glyphosate						

Chicken litter									
----------------	--	--	--	--	--	--	--	--	--

Beware when buying in animals or moving them into rested grazing camps as they are the animals which usually eat toxic plants such as tulip and ink berries (*Cestrum*).

Do have activated charcoal on the farm as the antidote for tulip poisoning! Dosage: 2 gram per Kg body weight, 1 Kg charcoal for 500kg animal. Toxic plants are sometimes eaten by young animals that do not know these plants. Be aware of this situation and know where these plants are growing on the farm.

## Nutritional deficiencies

The following nutritional deficiencies were reported by practices in the provinces:

Deficiencies	MP	G	L	NW	FS	KZN	EC	WC	NC
Energy	x	x	x	x	x	x	x	x	x
Protein	x	x	x	x	x	x	x	x	
Phosphate			x	x					x
Calcium		x	x	x	x	x		x	

Nutritional deficiencies were reported. It is important that ewes and cows receive sufficient supplementation so as to have optimal colostrum quality for their offspring!

Drought conditions are still present in many areas!

## Livestock production during drought - guidelines

HO de Waal dewaalho@ufs.ac.za

In large parts of the central interior available grazing material is scarce on veld (natural pasture). Prospects for improvement of the poor grazing conditions in the remaining part of summer and winter are not favourable. In addition to current poor grazing conditions, low levels of water in the soil during spring and early summer will also have a negative effect on veld production and livestock. Crops are already affected

negatively and therefore crop residues which are usually used as livestock feed will also not be readily available. The current prevailing situation is not good, but can be managed and the following guidelines may help to prevent mortalities and reduce financial losses:

- Ensure that cash flow is maintained judiciously.
- Safeguard the core breeding livestock. Income must be generated again by these females after the drought.
- Where still possible, provide strategic supplementary feeding on veld.
- Reduce the number of livestock that are dependent on feed sources on the farm by selling surplus animal or by temporary removing them from the veld – to a kraal or planted pasture.
- Restrict movement of livestock by confining them to small paddocks with shade trees or other protection from the elements. This provides better control over the quantities of feed provided daily to the animals.
- Ensure that all animals have freely access to clean drinking water.
- Separate the stronger and weaker animals to reduce competition at the feed troughs.
- Prevent thin livestock, especially cattle becoming too emaciated because of poor feeding conditions and lie down.
- Do not feed animals ad lib. over a long period. Ration the feed according to the required production levels, for example survival or maintenance (maintain body mass) or lactation.
- Do not waste feed by throwing it on the ground – use appropriate feed troughs or conveyor belts.
- Provide the rationed feeds every second or third day. Most animals will receive enough feed. It will also reduce competition at the feed troughs.

### **What can be fed?**

The basis for ruminants is roughage, be it on the veld or in the trough. Coarsely ground roughage is always better utilised (less waste) than in the long form. The energy content can be increased with an appropriate source (e.g. ground maize) and balanced with an appropriate crude protein source. The intake of minerals is then balanced according to the requirements of the animals.

- Feed pellets are merely convenient (transport, handling, less waste) but coarsely ground roughage and properly balanced(discussed above) can adequately meet the requirements of animals.
- Restrict the daily intake of salt (NaCl) for sheep to 5-10 g and cattle to 50-60 g.

### **Core herds/flocks**

- Herds/flocks must be grouped according to age and production status. Determine pregnancy in cattle as soon as possible after the current mating season. With sheep and goats, females can be scanned to determine if they carry twins/triplets to adjust their nutrition level.
- In addition to pregnancy, the condition of teeth must also be assessed, especially for older cows and ewes/does. Pregnant cows must still be able to graze until the next calving and specifically be able to wean the unborn calf. Females with worn teeth can still complete their production in a kraal, but this will have a price tag.
- Create an inventory of all available veld and other feed sources. This information is needed to determine the number of animals that can be maintained until well into the next summer.
- Reduce the number of animals dependent on the feed sources by marketing surplus animals or remove them temporarily from the veld. Note the reproduction record and weaning mass of the progeny of females. In each age class the less productive animals must be culled.
- The principle of “cutting-your-losses” applies and all expenses must be weighed and discounted against expected income over the short to medium term. Caution to sell younger breeding animals at a premium because they are in good condition and pregnant.
- Seek veterinary advice regarding any changes in the internal and external parasite control. General The situation of farmers differ – seek professional advice for assistance with strategic planning. When grazing material on veld is scarce licks will not help – often too much supplementary feeding is provided under such conditions on veld. Determine timely when to remove animals from veld and feed them strategically in small paddocks. Plant material may still be available along roads and can be cut and baled. The cladodes of spineless cactus pears can also be used as a good feed source – whole cladodes for cattle and coarsely chopped for sheep and goats. During droughts we cannot be too choosy about the quality of feed sources which can mean the difference between life and death of livestock. If poor quality roughage such as veld grass hay or crop residues or cactus pear cladodes are available, animal nutritionists can use it as basis to formulate diets to meet the minimum requirements of livestock.

### **The ruminant**

The plant material selected during drought on poor and dry veld contains little crude protein. The digestive system of ruminants and the symbiosis with microbes in the reticulo-rumen offer opportunity to supplement crude protein with a non-protein nitrogen (NPN) source such as feed grade urea. The microbes in the reticulo-rumen break cellulose (fibre) down and produce new nutrients (volatile fatty acids and microbial protein). The complex four compartment “stomach” develop gradually from the suckling phase (basically still monogastric) to that of a physiological mature ruminant. In younger calves

and lambs/kids the reticulo-rumen is still in the process of developing. Therefore, it is better to use natural and higher quality protein sources instead of NPN; bypass protein may also be supplied strategically.

### **Supplementary feeding (licks)**

It is important to address some critical questions regarding a supplementary feeding programme:

- What is the aim with the supplementation? Must protein, energy, a combination of protein and energy, or minerals be supplemented? Should animals gain in condition or must dry animals maintain mass (maintenance) or must lactation be supported? Animals in different production phases thus require specific types and quantities of strategic supplementary feeding.
- How can the aim be achieved best? Have the less productive animals been removed to make all grazing available for the remaining livestock? This option is still not used to the best advantage and can make a great contribution to improve the efficacy and also lower the cost of supplementary feeding to the remaining animals.
- Can it be ascertained whether the aim has been reached? Most well-intended programmes to improve animal performance fail in this regard, because the recommended level of supplementation is seldom achieved. Intake of supplementary feeding varies and is affected by feeding space (number of animals/troughs), access to troughs (dominance between animals), level of supplementation and how often the troughs are filled.
- Unless the provision of supplementary feeding is managed, some animals will consume too much while others ingest too little to benefit at all.
- Do not feed animals aimlessly on veld.
- A range of products are available; seek advice from a professional animal nutritionist regarding the options and products to be considered.
- Animals may lose body mass in moderation (10-15%), but then it must take place over a relatively long period and under control of judicious nutrition management.

### **Veld fires**

- Runaway veld fires or accidental fires can change the current precarious drought situation into a real crisis. An area where veld has burnt is practically in a disaster drought situation.
- Make effective fire breaks, especially along roads, around dwellings and ash dumps. Roads are not good fire breaks because the road surface is smooth and embers are easily blown over it by strong wind. Fire also spread easily through culverts.

- Veld fires suppress grass production for about two seasons. Therefore, veld must rest at least one growing season after an accidental fire and at least one growing season before a planned burning of the veld. In closing Production and reproduction of cattle are usually affected by drought and the get ill easier; the extent will depend on the severity of the drought conditions. Lactating cows, late pregnant heifers and weaners are the most vulnerable because of higher nutrient requirements. A good understanding of these factors is needed for a cost effective management strategy to mitigate the effects of drought on animal production, reproduction and health.

**The following general aspects of management may be considered for beef cattle:**

- Determine pregnancy of cows and heifers as soon as possible (8 weeks for cows and 6 weeks for heifers) after the bulls have been removed. Non-pregnant animals are identified for culling and the stage of pregnancy (early, mid and late conception) relative to mating determined.
- This information and body condition can be used to identify cows that may benefit from early weaning and/or strategic supplementation as well as those to be sold. Informed decision making create opportunity to lessen the effects of a drought.
- Sheep/goat production can benefit from early weaning of lamb/kids – the ewes/does can be fed at lower maintenance levels and lambs/kids finished in a feedlot.
- Animal health starts at the mouth; good nutrition is the basis of healthy animals and production. Changes in management may require adjustments in the programme for the prevention of diseases (inoculation). Remember, inoculation is a simple action (an injection), while creating immunity is a more complex process in animals which requires protein (amino acids in the diet) to produce the antibodies. During droughts and dry seasons the protein content of veld is generally low. Timely inoculation may be considered to ensure the development of better immunity.
- Drastic changes in management such as restricting animals in kraals increases stress and susceptibility for diseases. The incidence of opportunistic diseases may increase and require inoculation which is usually required. Specific local conditions and circumstances will dictate any changes in inoculation as well as external and internal parasite control programmes. Discuss any possible changes in the animal health and disease control programme with your veterinarian.
- Vitamin status must be evaluated and supplemented. We wish you success with the livestock enterprise.

Prof. HO de Waal Pr. Sci. Nat., Anim. Sci. [401721/83] Department of Animal, Wildlife and Grassland Sciences (70) University of the Free State PO Box 339 Bloemfontein South Africa

# Maak voorsiening vir droogtes

## Vraag

Wat kan ons uit huidige droogte leer wat ons slimmer en meer voorbereid maak vir die volgende een wat kom?

## Antwoord

Die natuurverskynsel van droogte kom sirkies en gereeld in Suid-Afrika voor en kan verwag en dus voor beplan word om te sorg dat die nadelige effek daarvan so min as moontlik is.

Hierdie opmerkings is op tipiese seisoenale en eenjarige droogtes van toepassing, daar waar ons kan sorg dat ons broek nie tot op ons knieë sak nie – soms is die droogtes meer jare agtermekaar en ons kan nie effektief daarvoor voorberei nie.

Daar is nie 'n kortpad of wondermiddel nie, diere het daagliks 'n minimum hoeveelheid verteerbare energie nodig om te oorleef (onderhoud) en addisionele energie om te kan produseer – addisionele voer moet dus verskaf word of die getal diere moet verminder word om met beskikbare voer hierdie energie te kan verskaf.

Die herkouer beskik oor 'n unieke verteringsstelsel van mikrobevertering en hersirkulasie van stikstof en is in staat om energie uit laegraadse ruvoer (vesel) te ontsluit – hierdie eienskap moet maksimaal benut word deur ook die regte aanvulling (stikstof of proteïen) te verskaf.

Daar is tye van oorvloed en goedkoop voer wanneer ruvoer oor tyd opgeberg moet word en opgeberg moet bly, selfs in tye van gunstige klimaatsomstandighede – ten minste 3 maande se gebruik moet so opgeberg word en beskikbaar bly.

Die hoeveelheid ruvoer wat nodig is om aan die onderhoudsbehoefte van beeste te voldoen, is 10kg ruvoer per GVE (grootvee-eenhede; 450kg LM) per dag – dit beteken 100 ton voer ( $\pm 400$  ronde bale van  $\pm 250$ kg elk) vir 100 dae vir 100 GVE'e.

Hierdie bale moet verkieslik in miedens van 50 ten minste 20m weg van mekaar af, gepak word om die risiko van brand te verlaag.

'n Veiliger keuse om 'n voorraad voer vir sporadiese droogtes op te berg en wat nie 'n brandgevaar inhoud nie, is kuilvoer in een of ander vorm – om droogtevoer vir 100 GVE'e vir 100 dae in die vorm van mieliekUILvoer op te berg, sal ±160 ton nat kuilvoer nodig wees wat teen 16kg per dag per GVE verskaf moet word.

Saam met hierdie ruvoer of kuilvoer kan goeie kwaliteit hoendermis (droë braaikuikenmis) opgeberg word, wat hoogs effektief en ekonomies as droogtevoer aangewend kan word – onthou om die diere teen botulisme of lamsiekte in te ent (ten minste twee keer en ten minste twee weke uit mekaar).

Indien hoendermis ook gebruik word, kan 50% van die 10kg ruvoer per dag en 10% van die 16kg kuilvoer met hoendermis vervang word om 'n onderhoudsvoer te maak – hier sal die hoendermis as stikstofbron dien om beide die ruvoer en kuilvoer se tekort aan stikstof aan te vul en die energie te ontsluit – die minimum lek, indien enige, sal dan ook nodig wees.

Geskryf deur: Dr. Kobus Swart, PhD; Pr. Sci. Nat, Dierevoeding. ([kobus@mixcure.co.za](mailto:kobus@mixcure.co.za))

## **Micro-nutritional and vitamin deficiencies**

**The following micro-nutritional deficiencies and vitamins were reported by practices in the provinces:**

Deficiencies	MP	G	L	NW	FS	KZN	EC	WC	NC
Iodine						x			
Copper						x		x	
Zinc						x			
Selenium	x		x	x		x	x		x
Magnesium									x
Manganese								x	
Vitamin A					x	x		x	x
Vitamin B 1						x			

**There are antagonists such as calcium, iron and sulphur which hamper the uptake of micro-minerals. Have water and soil samples analysed to see what the levels of these antagonists are. Arrange with your veterinarian to have liver samples analysed to determine the status of these micro-minerals in your herd or flock.**

**Selenium is a powerful anti-oxidant and necessary for immunity. Check the status of the herd.**

**Beware of fluoride poisoning as borehole water levels drop.**

**Supplement animals with vitamin A during winter and drought conditions.**

## Multifactorial diseases and other conditions

#### **The following conditions were reported by practices in the provinces**

Mastitis	x	x	x	x	x	x	x	x	
Navel ill	x	x	x		x	x		x	x
Umbilical hernia									
Red gut (sheep, torsion of gut)	x				x			x	
Rectal prolaps									
Rumen stasis									
Abdominal impaction									
Abdominal hernia									
Floppy kid synrome									
Swelsiekte									
Traumatic reticulo-pericarditis	x	x			x	x			
Trauma	x	x			x			x	
Teeth wear									
Plastic bags (ingestion)									
Downer	x	x	x		x	x		x	x
Anaphylactic shock									
Vestibular syndrome (middle ear infection)	x				x				
Hernia									
Deformaties									

Discuss the origin, treatment and prevention of these diseases with your veterinarian.

The cause of abortions should be established: brucellosis, enzootic abortion, Q-fever, leptospirosis, Rift valley fever, etc. The necessary preventative measures can then be taken.

Pneumonia and lameness (foot conditions) are wide spread.

## Metabolic diseases

The following diseases were reported by practices in the provinces:

Metabolic diseases	MP	G	L	NW	FS	KZN	EC	WC	NC
Acidosis	x	x	x		x	x	x	x	
Displaced abomasum		x				x		x	
Ketosis (Domsiekte)	x				x	x		x	
Milk fever					x	x	x	x	

Make sure that you adapt animals to feed containing concentrates as more and more cases of acidosis are reported when grazing animals on harvested maize fields.

Discuss the etiology, treatment and prevention of these diseases with your veterinarian.

## Reproductive diseases

Reproductive diseases	MP	G	L	NW	FS	KZN	EC	WC	NC
Dystocia (difficult births)	x	x	x	x	x	x	x	x	x
Endometritis					x	x	x	x	
Metritis	x	x	x	x	x	x	x	x	
Hydrops									
Poor conception	x	x	x	x	x	x	x	x	x
Retained afterbirth	x			x	x	x		x	
Sheath prolaps	x	x		x	x	x		x	
Uterine prolaps	x	x			x	x		x	
Vaginal prolaps	x	x	x		x	x	x	x	x
Penis injury									
Orchitis									

A poor conception rate on many farms is a huge issue. Visit your veterinarian to rectify this problem.

## Environmental conditions

	MP	G	L	NW	FS	KZN	EC	WC	NC
Exposure to cold		X						X	
Frozen to death									
Heat stress									
Lightning									
Electrocution									
Drought							X	X	X

## Other conditions

	MP	G	L	NW	FS	KZN	EC	WC	NC
Dermatospraxis									
Genetic disorders									
Wet carcasses									X
Drug residues (milk, meat, liver, kidney etc)							X		
Predators	X	X			X				
Theft/Sabotation		X			X	X			
Trauma (fractures etc)	X		X	X		X		X	
Trauma (veldfires)									

In the CODE OF CONDUCT of the RPO the following standard operating procedures are documented.

The local veterinarian should be your partner to help you achieve the necessary standards.

<http://www.rpo.co.za/BestPractices/English.aspx>

PRECAUTIONARY MEASURES TO SUPPORT BIO-SECURITY.

Precautionary measures are required to protect the herd against diseases acquired because of external contact. The following categories are of concern:

**1. DIRECT LIVESTOCK PURCHASES (and own animals returning):**

The following should be **verified** before importing new animals into the herd:

How long animals have resided at the purchase or previous location?

Have there been any recent disease outbreaks in the location?

Do brand marks clearly confirm ownership?

Was a vaccination program followed (need paper or veterinarian proof). What are the local prevalent external parasites and the routinely implemented control program?

Is a veterinarian supported control program against transmittable diseases followed?

Dates and sufficient number of tests for reproductive diseases of both male and female

Dates and tests for zoonotic diseases

The above should also be verified with the purchaser's own veterinarian.

**2. PURCHASES FROM SALES OR SPECULATORS**

Purchase only in areas which are not in close proximity to scheduled areas

Visually inspect the animals before purchasing for:

\* brand marks

\* parasite infestation

**3. TRANSPORT TO THE FARM**

Use only reputable transporters

Has the truck been cleaned and disinfected?

Truck to follow the shortest uninterrupted route

Truck to take the shortest route to the handling facilities

Do not allow the truck personnel to get in contact with the farm herd

**4. ARRIVAL ON THE FARM**

Off-load the livestock to limit stress and to be visually evaluated for any unnatural conditions.

Isolate them from the farm herd and shared facilities for at least 21 days (quarantine)

Retest for diseases of concern if needed, before mixing with the rest of the herd

Process new arrivals within 24 hrs after arrival (unique ID tag brand, dip, dose, vaccinate)

Inspect regularly

**5. FEED PURCHASES**

Ensure bales of hay are sourced from areas that are not bordering scheduled areas

Purchase feed from reputable dealers only

Avoid buying feed in second hand bags

Ensure feed trucks are also disinfected and cleaned, especially if also used to transport animals to abattoirs

**6. VISITORS**

Do not allow strangers or their vehicles amongst the livestock

Ensure fences are well maintained and preferably jackal and warthog proof

**7. EMPLOYEES**

Do not allow the employees to eat in feed stores  
Supply employees with sufficient ablution facilities  
Regularly arrange to let employees be medicated for tape worm and have health check-ups  
Keep record of all employee livestock on the property  
Treat employee livestock with separate but dedicated health programs  
Ensure employees understand the reason behind the implemented bio-security measures to help ensure compliance.

## **GENERAL AND REPRODUCTION MANAGEMENT**

Record keeping: All animals are individually identified and recorded.  
To prove ownership: All animals are marked with the registered brand mark according to the Animal Identification Act, No 6 of 2002.  
A defined breeding season is the basis of effective management: The breeding season coincides with the rainy season, i.e. the period when nutritive value of the pasture is at its best.  
Sufficient energy reserves in the herd as measured by condition scoring are vital, especially for effective breeding, and when inadequate the herd is supplemented in consultation with a nutritionist: Condition scoring of bulls and cows are regularly done, particularly at the onset of the breeding season and supplemented if necessary.  
Bull - cow ratios are maintained: A ratio of 1 to 25 is maintained in every separate herd.  
Fertility of breeding bulls: All breeding bulls are tested for mating ability and semen quality before the breeding season.  
Sexually transferable diseases: Sheath washes or scrapes on bulls are performed annually.  
Diseases that can cause poor conception, abortion or weak calves: Cows are vaccinated against such diseases in consultation with the veterinarian.  
Breeding success monitored by a veterinarian: Rectal pregnancy or scan diagnosis is done by the veterinarian 8 weeks after the breeding season.  
Twenty percent of cows or more not pregnant: Further tests are done to determine cause of low pregnancy rate.  
Culling of non-pregnant cows: Non-pregnant cows are removed from the herd and considered a necessary bonus to supporting herd income.

## **HERD HEALTH AND BIO-SECURITY**

Maintenance of herd health is key to a successful enterprise: A veterinarian should visit the farm bi-annually at least.  
Calf mortality before 3 months of age is an important reason for poor weaning percentage: Good management practices are applied to limit early calf deaths.  
Some diseases and parasites (internal and external) are more often encountered in specific areas:  
Annual vaccinations and a parasite control program should be applied according to regional requirements and in liaison with the veterinarian.  
Farmers selling weaned calves to feedlots may want to have a market advantage compared to others: A specific vaccination program is applied before weaning for that purpose.  
Herds may be at risk of being exposed to CA and TB: The herd is tested annually for CA and all heifers are vaccinated against CA between 4 and 8 months of age with an efficient, approved remedy. The herd is tested at least every 5 years for TB  
Precautionary measures are required to prevent diseases being imported into the herd: A quarantine program to keep incoming animals separate is followed. All incoming animals have a suitable certificate of negative test results or are of a certified clean, closed herd.

Stock remedies and medicines should be registered, correctly stored and used before the transpire date:  
All medicines and stock remedies are registered, stored and applied according to prescription.  
Prescribed medicines with a specific application are under the control of the veterinary profession: All  
prescription medicines are obtained and applied under prescription from a veterinarian.

---

## **Practices that had nothing to report**

Caledon – Drs. Drs. Louw and Viljoen

Cape Town – Dr. Sophette Gers

Magaliesburg – Dr. Ryan Jeffery

Nelspruit – Dr. Silke Pfitzer

Oudtshoorn – Dr. Glen Carlisle

Plettenberg Bay – Dr. André Reitz

Stutterheim – Dr. Dave Watermann

Tulbagh - - Dr. Dirk Trichardt

Vaalwater – Dr. Annemieke Müller

Vryburg – Dr. Jurie Kritzinger

## **Ostriches**

### **Western Cape**

#### **Malmesbury**

Poor nutrition - Property runs ostriches and cattle together. It was assumed that the ostriches would forage enough in order to meet their nutritional needs, but they were severely underfed. The role of the nutritionist in a livestock farming set-up is often underestimated.

#### **Oudtshoorn**

Intestinal roundworms	2 - Seasonal – birds onto pasture
Red gut	2
Mycoplasma	3
Protein/Energy deficiency	3 - Season change – cold poor feed intake, cold water/ cheap feed/ feed quality/ consistency.
Vitamin A deficiency	3

Suspect mycotic or megabacterial gastritis	3 - Gastritis resulting in poor feed intake – complicated by above
Air sacculitis	3 – Cold / immune compromise and dust - mycoplasma
Climate – cold	3 - Season change with some extremely cold days with some drizzle, chicks not on weight suffer most

## **Equines**

**Limpopo**

**Modimolle**

Sarcoid - 1

## **Game**

**Mpumalanga**

**Lydenburg**

Wireworm – 2

Sarcoptes mites – 3

**Gauteng**

**Pretoria**

Coccidiose

**Limpopo**

**Bela-Bela**

Resistant wireworm – 3

Blue ticks – 3

Phosphate deficiency – 3

Calcium deficiency – 2 Selenium deficiency - 3

Tapeworms – Impala, very poor condition, massive tapeworm infestation

Abscess – 3; Sable with jaw abscess; weak after treatment, died

Poaching – 2 rhino's -horns removed, died

Trauma – rhino's with stab wound after fighting (moved them after poaching incident)

**North West**

**Christiana**

Rabies – 1 Black backed jackal

**Schweizer-Reneke**

Blue ticks – 2

Red-legged ticks

**KwaZulu-Natal****Pongola**

Theileriosis (Corridor disease) – 1

**Western Cape****Oudtshoorn**

BMC (snotsiekte) – 1

**Northern Cape****Kimberley**

Pneumonia – Springbok

Kidney damage – Sable with pigment nephrosis (Babesia?)

Cachexia – Sable suffering from cachexia and hypothermia

**Swine****Gauteng****Onderstepoort**

Fractures - 1

**Western Cape****Darling**

Greasy Pig Disease – 3

Abscesses - 3

**Monthly report on Livestock and Wildlife isolations for July 2019 from****Vetdiagnostix –Microbiology Laboratory, supplied by dr. Marijke Henton**

(henton@vetdx.co.za)

Respiratory tract disease in cattle yielded *Pasteurella multocida* [22], *Mannheimia haemolytica* [22], *Trueperella pyogenes* [6], *Histophilus somni* [14] and *Mycoplasma* [13]. *Bibersteinia trehalosi* [was *Mannheimia haemolytica* T] was responsible for pneumonia in a sheep, and pneumonia in goats was caused by *Histophilus somni* and by *Klebsiella pneumoniae*.

Bovine mastitis yielded *Klebsiella pneumoniae* in one case, and *Streptococcus dysgalactiae* in another.

Calf enteritis was caused by *E. coli* [11], two of which were positive for *Cryptosporidium* in addition, and 3 of the *E. coli* were also ESBL [extended spectrum beta lactamase] positive, and were usually MDR strains as well. Multiple Drug Resistant strains are resistant to 3 or more groups of the antibiotics suitable for treating the particular condition.

Paratyphoid in calves was caused by *Salmonella Dublin* [1] and *Salmonella Typhimurium* [1]. Other septicaemias in calves were due to *E. coli*, *Actinomyces bovis* and *Streptococcus suis*.

Other conditions in cattle were gangrenous myositis, due to *Clostridium chauvoei* [3] and *Clostridium novyi* [4].

Lamb and kid enteritis was also associated with *E. coli* [2].

Suspected *Coxiella* caused abortion in a goat.

There was one case of porcine enteritis due to *E. coli*. Porcine septicaemia was due to *Salmonella Typhimurium* and *E. coli*.

A nasal discharge from a cheetah yielded *Cryptococcus neoformans*, and a pangolin had pneumonia due to *Klebsiella pneumoniae*.

<b>De Aar, De Aar Veterinary Clinic</b>
Sheep: 3
Drought causing havoc, depopulation of farms. Fountains and boreholes drying up
<b>Upington, Upington Veeartsenykliniek</b>
Beef: 3
Full scale disaster, downer cattle and sheep, poor condition and deaths. Farmers do not have food and financial reserves. Farmers can't go anywhere with their animals, no market for their animals in poor condition. A few clients got grazing for their animals in the Free State and lost animals due to adaptation problems. This month's problems all related to drought - botulism (cattle), phosphate deficiency (cattle), <i>E.coli</i> and white muscle disease (lambs from ewes that are fed)

### Non specific diseases
